

Moving the V5 Database from 1 PC to another.
Must be logged in as the ADMIN on both PC's
Must shut down SQL Express Services on both PC's

To shut down SQL Express, type Services in the Search Box.
Right click on SQL Server (SQLEXPRESS) and STOP.

Next go to C:\Program Files\Microsoft SQL Server\MSSQL11.SQLEXPRESS\MSSQL\DATA

Grab the TimeTraxV5.mdf and the TimeTraxV5_log.ldf. Save to a flash drive or on their Shared Drive. If your customer doesn't have a flash drive or access to the Shared Drive, bring the files over to your desktop.

Run Time Trax V5 on the new pc and then make sure they have the latest patch.

Shut down SQL EXPRESS SERVICES on the new pc.

Copy the 2 files that you saved.

Next go to C:\Program Files\Microsoft SQL Server\MSSQL11.SQLEXPRESS\MSSQL\DATA

Paste the 2 files into the data fold. You can replace the existing.

When this is complete, restart the SQL Server(SQLEXPRESS).
